Chan, Christina

Subject: Rush search for App. #: 10/083,168

Thurman I am seeking approval for a RUSH sequence search for an amended case, as

indicated below. If approved, could you

please forward the search to STIC and cc a copy to me.

Examiner: Nirmal S. Basi

Art Unit 1646

Office: Remsen Building, Room 4D68 Mail Room: Remsen Building, room 4C70

Sequence search:

App. #: 10/083,168. Result format: Paper.

### Title: ENDOGENOUS AND NON-ENDOGENOUS VERSIONS OF HUMAN G PROTEIN-COUPLED RECEPTORS

Inventors:Liaw et al

Priority Date: 4/14/97 Please search:

Method for screening for type 2 diabetes mellitus comprises detecting polymorphism in a calpain encoding nucleic acid segment or a protease-encoding nucleic acid segment.

Claim 75; Page 237-238; 257pp; English.

The present sequence is that of the human gene encoding G protein coupled

```
receptor, GPR35 as deduced from a composite CDNA (see AAA27485). The sequence of GPR35 is similar to that of a putative purinoceptor PPY9 (aq.11 identity) suggesting that ATP or other nucleotide is its ligand. GPR35 mRNA was detected in all adult and foetal tissues examined with relatively higher levels in adult lung, small intestine, colon and atomach. In these tissues, there are Z major transcripts of 2.4 and 4.4 kb, whareas in skeletal muscle there is a single transcript of 2.4 and 4.4 kb, whareas in skeletal muscle there is a single transcript of 2.4 and 4.4 kb, whareas in skeletal muscle there is a single transcript of 2.4 and 4.4 kb, which encodes a novel calpain-like cysteine protease, designated calpain 10. Mutations in the CARNIO gene are responsible for susceptibility to type 2 diabetes calpain-like cysteine protease, designated propensity for type 2 diabetes mellitus are based on detection of a propensity for type 2 diabetes mellitus are based on detection of a polymorphism in a calpain encoding nucleic acid. Methods are also claimed for identifying modulators of calpain activity, and using these modulators to treat diabetes, in particular through the regulation of an insulin secretory response or insulin mediated glucose transport

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        241 LAVGWNACALLETIRRALYITSKLSDANCCLDAICYYYMAKEPQEASALAVAPRAKAHKS 300
                                                                                                                                                                                                                                                              The present invention relates to transmembrane receptors, particularly endogenous human G-protein coupled receptors (GPCRs), mutant (nonendogenous) versions of the GPCRs, and the polynucleotide sequences encoding them. The GPCRs are settled to screening agonist or inverse agonist compounds for treating diseases associated with GPCR. Diseases that can be treated with such compounds include allergies, hypertension,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       1 MNGTYNTCGSSDLTWPPAIKLGFYAYLGVLLVIGLLLNSLALWVFCCRMQQWTETRIYMT

The present invention describes antigenic peptides (I) comprising: (a) any one of 1601 sequences (see ABP82019 to ABP83619) of 12-24 amino catids. Also described: (1) an assay for the detection of a particular G protein-coupled receptor (GPCR) or a candidate polypeptide in a sample; and (2) an isolated antibody having high specificity and high affinity or avidity for a particular GPCR. (I) can be used as GPCR modulators and in gene therapy. The antigenic peptides for GPCRs are useful in detecting an antibody against a particular GPCR. and in the production of specific antibodies. The peptides and antibodies are also useful for detecting the presence or absence of corresponding GPCRs. The antigenic peptides for GPCRs and antibodies are useful for diagnosing and designing drugs for treating immune-related diseases, immunological-related cell proliferative GPCRs and antibodies are useful for diagnosing and designing drugs for treating immune diseases, jimmunological-related cell proliferative diseases, or autoimmune diseases, immunological-related cell proliferative diseases, or autoimmune diseases, e.g. AlDS, Alzheimer's disease, concertratis, osteopromisis, cancer, cardiomyopathy, chronic and acute inflammation, allergies, Crohn's disease, graft versus host disease, Parkinson's disease, multiple sclerosis, pain, psoriasis, concertratis, dementia, member retardation, memory constraints, traum, tubers, or hypotension, renal disorders, rheumatoid arthritis, trauma, ulcers, or any other disorder in which GPCRs are involved. The antibodies may be used in immunoassays and immunodiagnosis. ABZ4553 to ABZ42869 encode GPCR proteins given in ABP81019.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present invention relates to a method for predicting pathological conditions in heart failure using expression of one of 17 gene sequences (ADBG7663.ADBG7678); or protein sequences encoded by the genes (ADBG7648-ADBG7662). The proteins and genes are useful for diagnosis, treatment and prevention of heart failure.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      240

compounds useful in the treatment of GPCR-related diseases; a transgenic compounds useful in the treatment of GPCR-related diseases; a transgenic mouse comprising a GPCR gene of the invention; a mouse comprising a comprising a GPCR gene of the invention; a mouse comprising derived from the transgene or in an endogenous GPCR gene; cells derived from the transgenic mice; kits comprising several mice, each of which has a mutation in a different GPCR gene of the invention, and kits comprising comprising a GPCR moteled of the invention. The invention further discloses variants of the GPCR polypeptides and vectors comprising a GPCR nucleic acids and proceed any of diseases including neurological disorders (e.g., Alzheimer's disease, diseases or schizophrenia); cells acids and proceed any comprisions of the adrenal gland; disorders (e.g., Alzheimer's disease, distributions or intestine cells. Cohn's disease, diarrhoea, food poisoning or irritable bowel cells. Crohn's disease, diarrhoea, food poisoning or irritable bowel cells. Crohn's disease, diarrhoea, food poisoning or irritable bowel cells of the adrenal gland; disorders (e.g., autoimmune disorders (e.g., angena, cardiac arrhythmia or myocardial infarction); muscular disorders (e.g., autoimmune disorders (e.g., angena, blood disorders (e.g., anthitis, gout or osteoporosis); metabolic or nutritive disorders of the kidney, liver, lung, breast, ovary, uterus, prostate, testis, skin, stomach, pancreas, spleen, thymus and thyroid (e.g., cancers). The present sequences not shown were obtained in the celetronic format directly frow Wilpo at the printed specification; those sequences not shown were obtained in celetronic format directly frow WIND at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               61 NIAVADLCILCTIPFVIHSIRDTSDTPLCQLSQGIYLTNRYMSISLVTAIAVDRYVAVRH 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Š
                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                                                      The invention relates to pharmaceutical compositions that comprise an agent that inhibits the expression or activity of a tumour-associated antigen (TAg) that is encoded by a nucleic acid. The pharmaceutical compositions and related compositions, are used for treatment of diseases associated with (abnormal) expression of TAg, specifically cancer e.g. of lung, breast, prostate, colon, stomach, pancreas, ear/nose/throat, kidney or cervix, also melanoma. Compositions containing TAg, or related nucleic acid, antibodies or host cells, are also useful for diagnosis and sequence of a human GPR35.

the invertion relatice to the use of numban G-protein coupled receptor 35 (GRR35) for screening therapeutic agents useful in the treatment of cardiovascular disorders, liver and gastrointestinal diseases, cancer disorders, inflammatory diseases, metabolic diseases, hematological disorders, inflammatory diseases, metabolic diseases, hematological disorders, in a mammal. GPR35 is a G-protein coupled receptor (GPCR). The cast compound to the cast compound to the cast compound to the cast specified diseases in a mammal comprising determining the above specified diseases in a mammal comprising determining the amount of the GPR35 polymelectide in a sample taken from the mammal, and determining the amount of the GPR35 polymelectide in healthy and/or diseased mammals of GPR35 polymelectide in healthy and/or diseased mammals. (CRR35 polymelectide in healthy and/or diseased mammals.) (CRR35 polymelectide in healthy specified diseases in the mammal.) (CRR35 polymelectide) (3) use of regulators of a GPR35 for the preparation of the pharmaceutical composition or for the regulation of GPR35 activity in a mammal having the above specified diseases; and (4) a method for the preparation of the pharmaceutical composition or for the regulator ameliorates the symptoms of the above specified diseases; and mammal, and combining the captabator with an acceptable pharmaceutical capants for treating cardiovascular disorders, inflammatory diseases, and gastrointestinal diseases, cancer disorders, inflammatory diseases, neurological disorders and urological disorders, respiratory diseases, concerdisorders in a mammal, e.g. humans (preferably), dogs, cats, cows, horses, rabbits, and monkeys. This
                                                                                          screening; cardiovascular disease; gastrointestinal disease;

```
The present invention relates to transmembrane receptors, particularly endogenous human G-protein coupled receptors (GPCRs), mutant (nonendogenous) versions of the GPCRs, and the polynucleotide sequences encoding them. The GPCRs are useful for screening agonist or inverse agonist compounds for treating diseases associated with GPCR. Diseases reflux disease, depression, magraine, schizophrenia, ulcers, psychotic disorders, asthma, bronchospasm, anaesthesia, myocardial infarction (MI), stroke, glaucoma, prostatic hyperplasia, epilepsy, prostate cancer, anxiety, prostatic hyperplasia, epilepsy, prostate cancer, sequence represents a mutant human GPCR.

The present sequence is human receptor-associated protein (HRAP) from Incyte clone 3083742 obtained from OVARTUNOI cDNA library. This sequence is expressed in haemacropoletic/immune, gastrointestinal and reproductive tissues. HRAP has cytostatic, immunomodulatory, antianflammatory, cardiant, antiarteriosclerotic, hepatotropic, antiantentic, antiantentic, antiantentic, antiantentic, antiantentic, antiantentic, antiantentic, sequence antidiabetic, dematological and neuroprotective activities. The present sequence is useful in the diagnosis, treatment and prevention of disorders associated with HRAP expression, especially cell proliferative, autoimmunefinifammatory, reproductive, cardiovascular and gastrointestinal disorders (e.g. atherosclerosis, cirrhosis, leukaemia, cancer, AIDS, arthritis, allergies, anaemia, asthma, dermatitis, diabetes, osteoporosis, multiple sclerosis and irritable bowel syndrome)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       61 NLAVADLCLLCTLPFVLHSLRDTSDTPLCQLSQGIYLTNRYMSISLVTAIAVDRYVAVRH 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ð
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         This invention relates to a novel method of identifying ligands to an orphan receptor protein which comprises transforming cells with DNA encoding a fusion protein of the orphan receptor with a fluorescent protein, so that the fusion protein is expressed in the cells (or cell membranes isolated from them) and contacting the cells with the potential ligand to be tested. A suitable fluorescent protein for incorporation in the fusion protein is green fluorescent protein (GFP), for example GFP-1, wild-type GFP, GFPUV or Enhanced GFP (EGFP). The method is useful for the identification of ligands binding to an orphan receptor protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      LAVGWNACALLETIRRALYITSKLSDANCCLDAICYYYMAKEFQEASALAVAPRAKAHKS 300

This invention relates to a novel method for obtaining a DNA that encodes a peptide acting as agonist, antagonist or inverse agonist on a target creeptor. Specifically, it comprises transformation of endocrine cell innes originating from mammalian hypothalamus and pancreatic islets, culturing the transformants and contacting with cells expressing the target receptor. The identification of those cells with a response reaction can be used for selecting a transformant cell line with the appropriate target activity that is expressing the novel transformed DNA. Accordingly, the present invention describes novel cell lines that are applicable in expression cloning systems of bloactive peptide precursor genes, and in screening GPCR ligands for use as drugs including agonists, antagonists and inverse agonists i.e. activators and inhibitors. Such cell lines can provide a highly sensitive and convenient GPCR ligand assay system. This polypeptide sequence is the human GPCR GPR35 D133A mutein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Endocrine cell lines originated from mammalian hypothalamus and pancreatic islet, applicable in expression cloning systems of bioactive peptide precursor genes, and in screening G protein-coupled receptor
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Kunitomo H;

The invention provides GPR35A polypeptides having at least 70% identity with the present sequence, GPR35A polymucleotides, recombinant materials, and methods for their production. GPR35A polypeptides can be used for identifying agonists and antagonists/inhibitors, and for detecting diseases associated with inappropriate GPR35A activity or levels. GPR35A polypeptides and polymucleotides, agonists, antagonists and antibodies are used to treat: infections such as bacterial, fungal, protozoan and viral infections, particularly HIV-1 and HIV-2; pain; cancer; diabetes;
                                                                                                                                240

Determining if a nucleic acid is a marker for a phenotype/cell type of interest, by global comparison of expressed sequence tags known to be expressed in the phenotype/cell type with all ESTs expressed in normal
                                       Claim 29; Page 448-449; 516pp; English.
```

The invention relates to a novel method for determining if a nucleic acid is a marker for a predetermined phenotype/cell type of interest from a CC is a group of expressed sequence tags (BSTS) known to be expressed in the comparison of a group of expressed sequence tags (BSTS) known to be expressed in the comparison of a group of expressed sequence tags (BSTS) known to be expressed in the comparison of in order to identify BSTS that are preferentially expressed in the phenotype/cell type of interest tare preferentially expressed in the comparison of the invention is useful for Arabidospsis or human. The cell type of interest from a biological species, preferably cas a tumour cell, and the predetermined phenotype is a stress induced phenotype such as hyperosmotic stress or high salt conditions. A method of the invention is also useful for detecraining the progression of colon cancer in a human, for detecting a tumour cell, and for regulating or preventing the growth of a tumour cell. An antibody of the invention is useful for detecting a tumour cell, and for regulating or tumour-associated markers. A polypeptide of the invention is useful as an imman. The present sequence represents a cumour-associated antigen of the invention.

The invention relates to pharmaceutical compositions that comprise an agent that inhibits the expression or activity of a tumour-associated artigen (TAg) that is encoded by a nucleic acid. The pharmaceutical compositions and related compositions, are used for treatment of diseases associated with (abnormal) expression of TAg, specifically cancer e.g. of lung, breast, prostate, colon, stomach, pancreas, ear/nose/throat, kidney or cervix, also melanoma. Compositions containing TAg, or related nucleic acid, antibodies or host cells, are also useful for diagnosis and monitoring of tumours. The present sequence represents the amino acid sequence of a human GPR35.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               61 NLAVADLCLLCTLPFVLHSLRDTSDTPLCQLSQGIYLTNRYMSISLVTAIAVDRYVAVRH 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           A MOLECULE type: mRNA
A, Residues: 1-308 ~WEB>
A, Crosser-references: UNIPARC: UPI0000055A6B; GB: L06109; NID: g304383; PIDN: AAB06587.1; PID: A, Experimental source: T-cells
C, Comment: This receptor plays a role in T-cell activation.
C, Genetics:
A, Gene: p2x8
C, Superfamily: ATP receptor P2u
C, Keywords: G protein-coupled receptor; transmembrane protein
C, Keywords: G protein-coupled receptor; transmembrane predicted <TM1>
F; 15-40, Domain: transmembrane #status predicted <TM2>
F; 15-109, Domain: transmembrane #status predicted <TM3>
F; 13-153, Domain: transmembrane #status predicted <TM5>
F; 177-201, Domain: transmembrane #status predicted <TM5>
F; 227-248, Domain: transmembrane #status predicted <TM5>

intron 17 purinergic receptor P2YS - human
NiAlternate names: G-protein coupled receptor
C;Species: Homo sapiens (man)
C;Date: 16-Jul-1999 #sequence_revision 16-Jul-1999 #text_change 09-Jul-2004
C;Accession: 109508
R;Bohm, S.K.; Trumpp, A.; Khitin, L.M.; Kong, W.; Payan, D.G.; Bunnett, N.W.
submitted to the EMBL Data Library, April 1997
A;Description: The human purinergic receptor P2YS is encoded in intron 17 of the retinoble A;Accession: 709508
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               A Status: preliminary; translated from GB/EMBL/DDBJ

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
